

Here is a quick go-through of our project explaining each feature in detail.

This is our landing page

The user has two options either to log in or sign in.

If the user selects to log in the next page appears where the user has to enter their credentials:

The user also has the option to sign up if they do not have an account yet.

The image shows a 'Signup' form on the left and a 'WolfTrack' banner on the right, both set against a red background. The form has fields for Name, Username, Password, and a dropdown for User type (currently set to Admin). It includes a 'Register' button and a link to 'Log In' if the user already has an account. The banner features a person using a smartphone, the 'WolfTrack' logo, and the slogan 'Don't stop until you're proud!'.

WolfTrack

Don't stop until you're proud!

They also have the option to select the type of user as Admin or Student.

This image is similar to the previous one but highlights the 'User type' dropdown menu. The dropdown is open, showing 'Admin' and 'Student' as options. The rest of the form and the 'WolfTrack' banner remain the same.

If you want to extract the skills required from a given Job description:

The image shows a web interface for a 'Job Skills Extractor'. It has a red background. In the center is a white rounded rectangle. At the top of this rectangle is the title 'Job Skills Extractor' in bold red text. Below the title is the label 'Enter Job Profile Description:' in red. Underneath is a large text input area with the placeholder text 'Describe the job profile...'. At the bottom of the white rectangle is a red button with the text 'Extract Skills' in white.

Once you enter the job description, the output is as below:

The image shows the same 'Job Skills Extractor' interface as before, but now with text entered in the input field and results in the output field. The title 'Job Skills Extractor' is at the top in bold red. Below it is the label 'Enter Job Profile Description:' in red. The text input area contains the following text: 'A Bachelor's or Master's degree in Computer Science, Computer Engineering, or a related field. Proficiency in contemporary software languages, especially C++ & Python. A background or interest in building large-scale, real-time, and distributed applications is desired. Interest in venturing into the reliability and observability landscape. An unwavering commitment to owning your tasks both as an independent'. Below the input area is a red button labeled 'Extract Skills' in white. Underneath the button is the label 'Extracted Skills:' in red. At the bottom is a text output area containing the text: 'solving, -, C++, problem, Python'.
